TASK

You have just seen the following advertisement in the university magazine:

Share with us what you think about the importance of physically attending classes in-person for university students instead of online classes. We're looking for articles about the benefits of studying in a classroom with a teacher. The best article will be published in our university magazine and the winner will receive a €200 gift card.

You have decided to contribute, write an ARTICLE in which you:

- Explain why physically attending classes can improve learning.
- Mention why attending class at a university also provides the student with other resources and facilities.
- Suggest ways in which teachers can encourage students to go to class.

Give your article a title. Write your ARTICLE in 180-220 words.

Example 1

Being at classroom

The goal of this article is to emphasize the importance attending classes physically.

With the COVID-19 CRISIS arrival, Every academic exam, task or class had to be done online. The use of platforms like Microsoft Teams and Zoom from teachers increased massively, remote classes have a huge advantage ahead physical in terms of availability and time-line dedication.

However, online classes are less effective for improve learning. In my opinion, is way better attending a lesson in a classroom, where you're face-to-face with your teacher, and your doubts can be solved. Besides, it's harder to see on camera when your proffesor writes some thing on the board.

In conclusion, we need to make sure the advantages of online classes don't Persuade us about attending physically. Moreover, teachers have to atract students somehow. Maybe giving Some gifts or rewarding them on other way.

Example 2

“Academic Excellence”

Waking up at early hours in the morning can be classified as a daunting task, more so if we must go to class. Falling back to sleep whilst watching your online classes can cost you time and your academic success. Having this in mind, in this article I'll be going over the main reasons as to why university students should physically attend to their classes.

Have you ever felt lost during a class? Because I have, a ton of times. Thankfully, due to my physical attendance in class, I am able to inquire the teacher regarding any possible questions that may arise during the class, and teacher will swiftly veer me on to the correct path, and I am eternally grateful for this. since it is not as easy, fast, and comprehensible, when you are learning from a distance - watching classes online

Another upside to attending classes in-person is your immediate access to resources (eg teachers books) and facilities (e.g. labs, libraries...) , I definitely do not have this at home!

In conclusion, the decision to attend classes in-person is ultimately left to the student, but I firmly believe that teachers can entourage their fellow students to physically attend their classes, a way to encourage such behaviour could be by implementing. "extra-points" reward system to those attending closes in-person, helping the early birds achieve higher grades!

Example 3

Why students should retake the physical class attending format

A couple weeks before, a DANA hit Valencia by surprise and many people were affected by it. For this reason, universities have decided to continue the lessons in online-hybrid format, which avoids students to commute to the university and makes things easier for them.

Despite this, online classes have demonstrated not to be as effective as presential ones. Many students can't keep their focus on studies being all day at their homes without interaction with other students and professors. Moreover, some students directly don't attend to classes due to their lack of motivation. Another problem related with this format is that laboratory sessions can't be realised or not in the proper way.

For this reason, professors should encourage students to retake physical classes. Also, they should convince them that going physically to class has more benefits than being at home, since when they are at the campus they have all the facilities and resources that they need as a sports area or libraries, where they are more productive.

Finally, online-hybrid format has shown to be an alternative to traditional teaching system, but not an alternative to replace it because of its problems. As I said before, teachers should encourage students to attend to the lessons physically and to retake the normal learning pace that they had before, since, as demonstrated previously, is higher than the current pace.

Example 4

Other ways of teaching.

Physically attending classes used to be the normal way to teach. at the university. But sometimes, because of several curcunstances, we have also tried online classes.

Online classes and are full of distractions lack of responsability because the teacher don't know what you are doing. This deserves in a reduced learning. Students often don't ask questions or pay attention, so physically attending classes are the best way to avoid this from happening.

In-person classes have Some advantatges wich make you have some facilities that in online classes are impossible. Having a real blackboard to see, instead of a computer in your beedroom, makes easier to copy and undernstond the exercises. You can also stay at the end of the class and ask any question you have, wich it's easier to solve because you're not throught a computer.

Teachers may do their best to encourage their students to assist to class. Games, like Kahoot, or class work with some doing same class work with puntuation for the subject, is a good way to make it.

Online classes are full of distractions that reduce the efficiency of this kind of teaching. So physically attending classes, if students attend, Improves the way of learning and is the best way to learn.

Example 5

Are closes in on the best way to learn?

Nowadays it is essential to know about alls ways we have to teaching.

First of all, the online classes can be comfertable, because you don't need to get out of your house to learn In spite of that, when you have a teacher by your side, you feel the class more personal and a support can be feeling by the students.

-Maeover, I strongly believe that attend the lesson in-person instead of online, con make your works will be better. Thus, going to class can help us when we are in exam because we are able to ask for doubts.

For all of that, in my opinion, is essential to know how technology is promoted and try to adapt the classes to this technological era. For instance, make interactivities. proves in classes or teaching with some power points. Maybe if we want to encourage students to go to class we need to adapt the classes with some devices to make the teaching and learning easier.

To sum up, there aren't a good or bad way for learning or teaching. There are just different and because of that is important you can choose the way you like, The most important think is to live in a world that be award to as eveolve as a person.

Example 6

Presentiality or online?

Since the technology has been improving, the education has also been changing. One of the firsts aspects that changed was the presentiality. However, is it better to do physically classes or online?

The most common way of education all along the history are the physically attended classes It is proved that these type of classes Improve our skills and learnings. Furthermore being able to socialize with others brings us more knowledge due to the fact that we can learn from them.

However let's get into talking about online classes. These make the students to stay at home for much more hours than they should. Everybody needs to go out and interact With others. Moreover to stay at home means that you would not have the same facilities than in the university. What about the gym? Universities have gym!

All in all, teachers have the chance to encourage students to go to class. That's why they have to motivate them..

The best regard a student can have is to have a great teacher

Example 7

Attending classes physically or online

Since the creation of internet classes and studying have been experiencing different changes. All these changes lead to an actuality problem. More specifically, whether if students should go physically to classes or attend instead online.

First of all it is well known that going physically to classes can improve learning facilities. Maybe you are questioning yourself about how is that possible. Well, it promotes activity for instance if you are attending university online, it will be easy to feel isolated. That is because in reality you are alone. On the other side, going physically will help make classes more fluent ..learning will come more natural.

As it is said before, attending classes also promotes interactions which develop into making friends, a necessary part of our lives.

It is generally accepted that online classes are less demanding as you are at your home. However, teachers should encourage students to go physically to their lessons one way can be by promoting participating in classes with funny quick tests.

Furthermore, those tests will serve as a way of studying and memorizing. Even though, the discussion is still up to the student

Example 8

Physically attending classes in-person

Nowadays it's normal to do homework and have online classes, after the Covid - 19 we had to adapt some ways to keep going, and one of the ways is to do things online, like work, classes, experiments etc.

Firstly, with attending classes learning because you can with your teacher can improve learning because you can have eye contact with your teacher and friends, both sides can feel, if the student has learned and the teacher has taught. In the classroom the teachers can see by the face of the student if he has any question before he asks it.

Secondly, going to the university in-person the student can change more ideas with a group of other students, can be ask new questions, giving to him new doubts open his mind about other things, the same way can be with the teachers, been behind of a computer of course it's easier you don't have to lose time going to the classroom. It's a quicker way but at the same time you can't associate with another person, associate from behind of a computer it's a fake contact, going to the university you can have more resources like the library, this combination of library, group of students and teachers could be great to both sides.

To the teachers I recommend them sometime to give different type of classes dynamic classes, with examples that what he is teaching can be use everyday. This should take the attention of the student and this interest will bring them to the classroom

Example 9

Face to face with your teacher

How does affect attending classes in person? Since Covid 19 times, online classes are more frequent and a great number of students preffer them instead af gaing physically to their universities However which are the reasons to choose attending lessons in person?

Firstly, it is believed by many experts and university tutors that the process of learning a subject starts at the classroom. Listening and writing in class could help you noticing about things that probably would appear in your exams, so, taking notes, it is necessary to raise your qualifications.

Secondly, when someone goes to the faculty. it is easier to stay aware of new trends and ways to study or using technology in your favour for adquiring better marks, and, also, being informed about interesting news that the faculty shares with students.

Furthermore, the most important support for students to understand better what they are studying - the teachers. It is said that most of the students don't use properly the help that a teacher can bring you, as a consequence, of being shy or not having self-confidence .

According to the last paragraph, how teachers could wake up the interest of the admins to assist presential lessons? The most obvious one is doing presential classes mandatory by not allowing students to do the exom if if they are not attending lessons. Other way and not less important, they should do interesting classes for example showing up real situations of their future jobs the students will apply.

To sum up it is showed in this article that there are many reasons to attend presential classes and also clear statements that demonstrates the importance of it to reach your student goals.

Example 10

CLASSES IN PERSON Vs ONLINE CLASSES,

If you are one of those people who don't know if classes in - person are better than online lessons, this article is for you.

Firstly, it is a fact that we can't compare actual education with the education our grandparents have received. Due to this part, physically attending could help us to be more concentrate when we do some task. Moreover, we have the opportunity to ask a teacher, in the case we have some doubts.

At the university attending does it's an important point. If you pay attention and take notes, later must be easier for you study the exam. Besides if you don't get a routine this process don't be efficient. Another facility is the personal relation you can create with your teacher, that can help you when teacher have to put your marks, provide that you have great marks.

Unfortunately, lot of people decide stay at home, because they have the option of online class. Moreover, people in their home don't do a big effort effort for study. Teachers must encourage students to go to class with for example extra points or positive marks

Example 11

Do you think attending classes in-person have an added value?

Nowadays, online learning is becoming increasingly popular these days at universities, but it should not underestimate the importance of attending classes in-person. Not only participating face-to-face learning enriches academic experience at but it also provides students with essential resources. Besides, it promotes a sense of community that can not be acquired online.

Additionally, the main benefit of attending classes-in-person is direct interaction between teachers and students. This allows. then to share spontaneous discussions and real time to clarify doubts. In addition, students can concentrate better as classrooms provide a good environment.

Furthermore, another important point is students improve softs skills such as: time management, teamwork, leadership, conflict resolution and assertive communication which are vital for personal and professional growth.

On the other hand, it is important to suggest different ways to encourage students and to do so, teachers should promote interactive teaching methods by sharing group activities or practical lessons. Probably, they could motivate students if they make enjoyable and participatory classes.

To sum up, attending classes in-person will transform education into an immersive multi- dimensional experience. This also prepares students to learn how to cope and face challenges in their lives..

Example 12

Are online classes as bright as they should?

Nowadays it is shared the believe that every schedule will improve if work it becomes online. Thousands of experts are arguing about the way students are evolving during this technological change.

To begin with, it is known that online classes became real in 2020, with the CoviD-19 crisis. Nobody could go out of their houses, so the colleges and universities started to show their employees how to teach with their laptops and gadgets. Nevertheless, four years later students still don't have a clear idea about which is the best way to learn.

Many students think that staying at home is more comfortable and cheaper, as they don't have to take any transport to go to the college or university. But the truth is that physically attending classes gives students much more resources than they think. For example, attending classes are a way to help shy people with their relationships. Also, there is not the same fluency in be an online class where students tend to be more "disconnected", than in a physical class where they see the teachers face to face.

Moreover, is easier to pay attention to the class if the student has done the effort of coming to it. And teachers also tend to be more interactive with the students during physically attending classes.

In conclusion, teachers should encourage students to go to class by sending them team works organising "dialogue events" at the class, to make them feel the need of going to college. If teachers acted actively by this way, students would prefer physically attending classes instead of staying at home with boring online classes.

Example 13

THE BEST WAY TO LEARN

Nowadays, online classes are getting more and more common between universities. But are they the best way to learn?

Firstly, physically attending classes are funnier. It is easier for students to keep their focus when they are listening to a person, in this case the teacher, and not a computer. The communication is more fluent as you get to see gestures and expressions.

Another advantage of physically attending classes is that students can use other resources, such as sport facilities. Sports like football or tennis can be played at university after classes if you go physically. Moreover, going everyday to university allows you to see your friends for several hours a day. Have you ever thought about how lovely it would be for us, as students, to complete a degree taking online classes only? We are social animals by nature and going outside everyday helps our mental health, avoiding illnesses like depression or anxiety.

Some Suggestions in which teachers can encourage students to go to class could be taking in consideration attendance. A small part of the final mark could be gained through observation and interest showed. Another way could be to reserve some class dates for doubts answering.

To sum up, physically attending classes have more advantages than disadvantages, and if those suggestions were implemented, the number of students that go to class would increased and they would also feel more motivated to attend to university everyday.
